

# DEVICES & COMPUTERS

---

*July 18, 2017*

Do you mind if I strap your phone  
to my forehead so I can pretend  
you're looking at me when I talk?

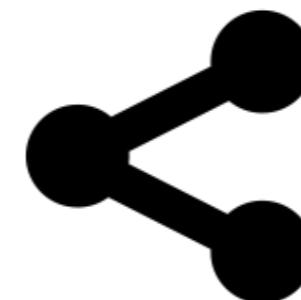

# SHARING

---

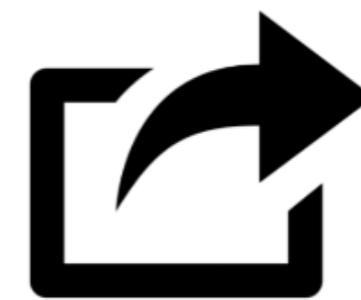

- A smart phone is really good at doing things other than making a call, such as browse the internet, take photos, location help such as maps, music, movies, and so much more. You can take that one step further and share virtually anything with others. Some sharing options include:

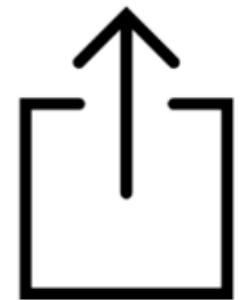

- Texting
- Emailing
- Social Media
- Printing
- AirDrop
- AirMedia

*Old Icon*

*Still in Use*

*Most Recent*

*If it makes more sense, you can call it a “Send Out” icon because not all options are necessarily “Sharing”*

# SHARING WITH PHOTOS

---

- One of the most common shared items on a phone are photos. We talked a little bit yesterday about sharing through iCloud, but what if you don't want to do that? You can definitely share in other ways, including through a:
  - Text
  - Email
  - Social Media
  - Air Drop
- If you have an Apple TV, you can display your photos on the TV like if it were a presentation

**WHAT ABOUT OTHER  
APPS?**

# OTHER APPS

---

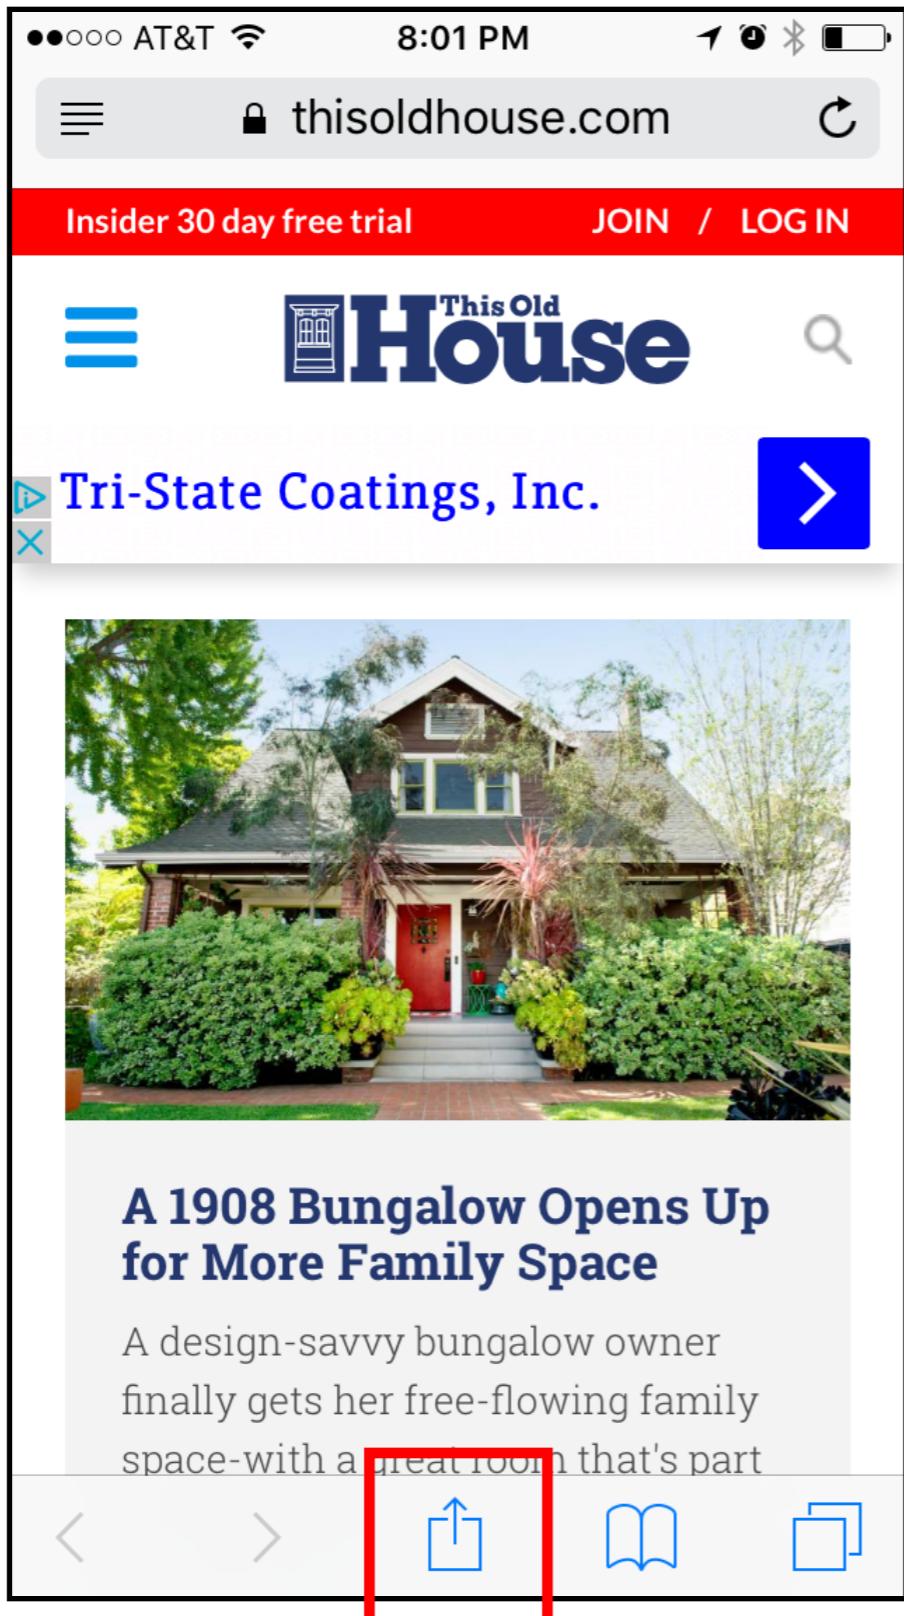

- Most other apps have the capability to share information. Even non-Apple apps. They will commonly use one of these 3 icons, or simply just say “Share.” You may have to look up on the developer’s website what it says you are allowed to share, and what you aren’t, so make sure you look into it if it isn’t obvious.

# SHARING ON SAFARI EXAMPLE

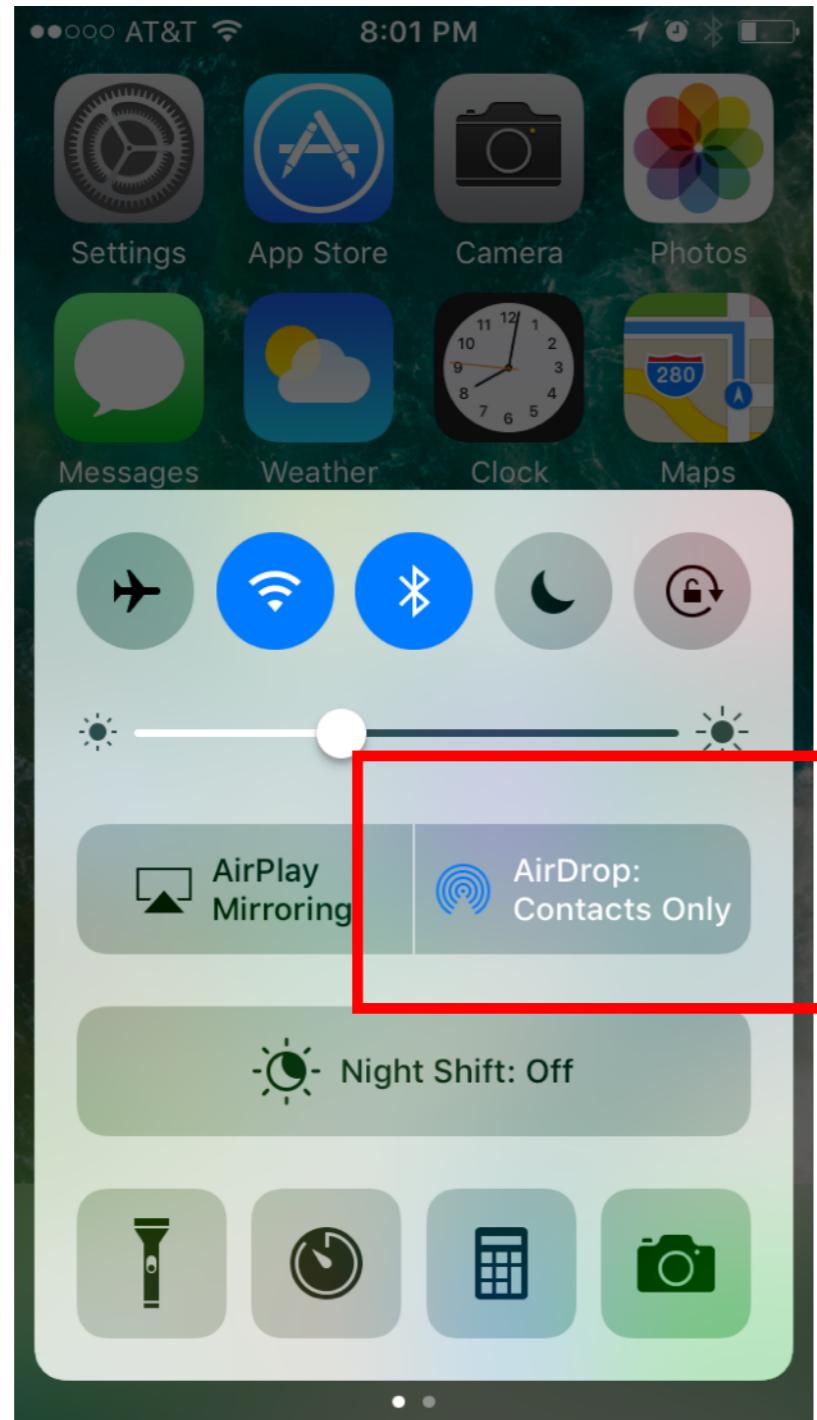

**WHAT EXACTLY IS AIR  
DROP?**

# AIR DROP

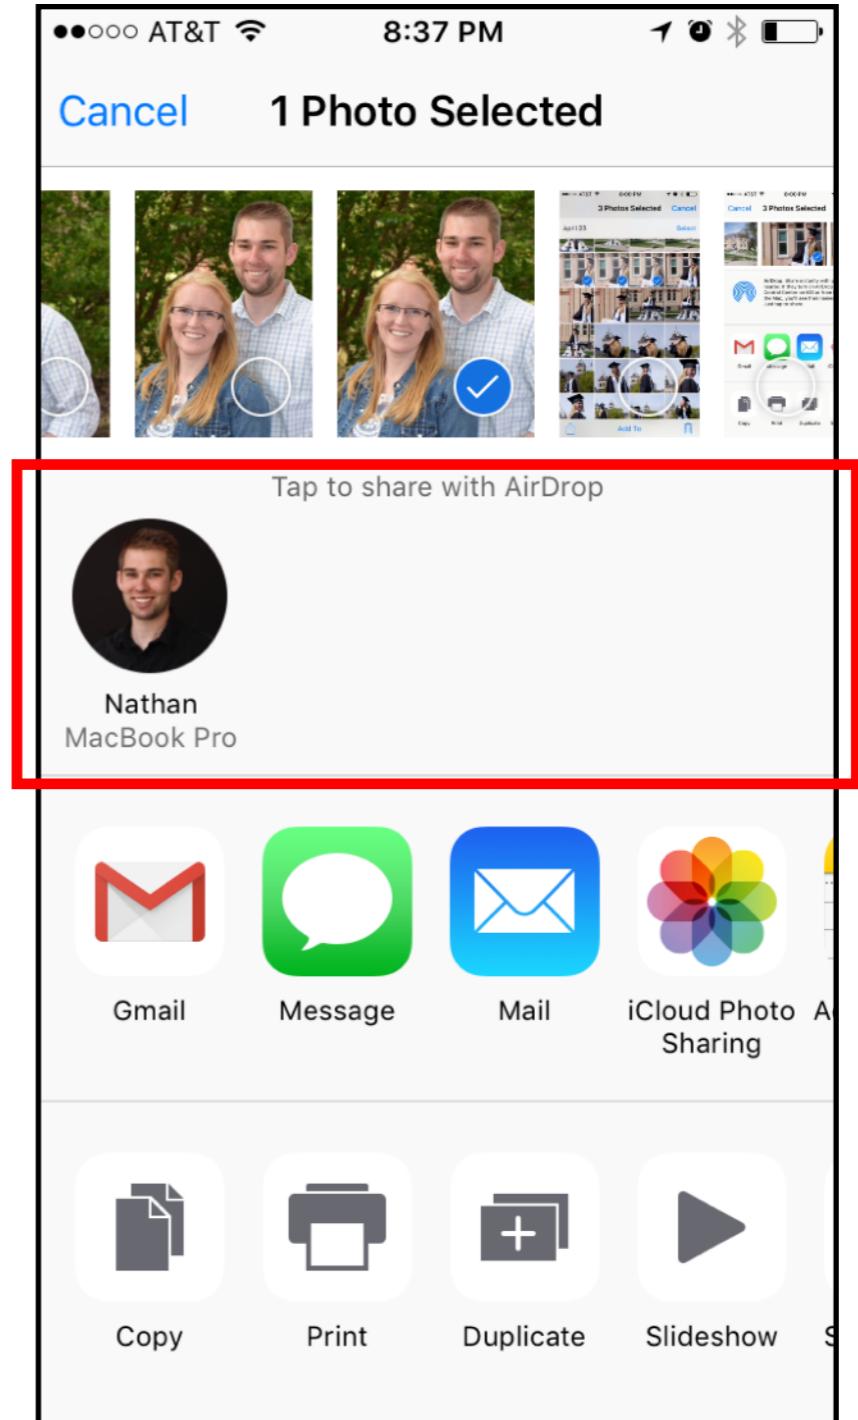

- Air Drop is a fantastic addition to Apple devices. It allows you to send an image to another Apple device over Bluetooth and Wifi. **That means both Wifi and Bluetooth must be turned on in order to use this.**
- There are 3 settings that you can use. They are to allow:
  - No one can send you anything at anytime
  - Only people in your contacts can send you stuff
  - Everyone can send you stuff
- Depending on what they send you will depend on where it goes on your phone

# AIR DROP

*Where you set your preferences*

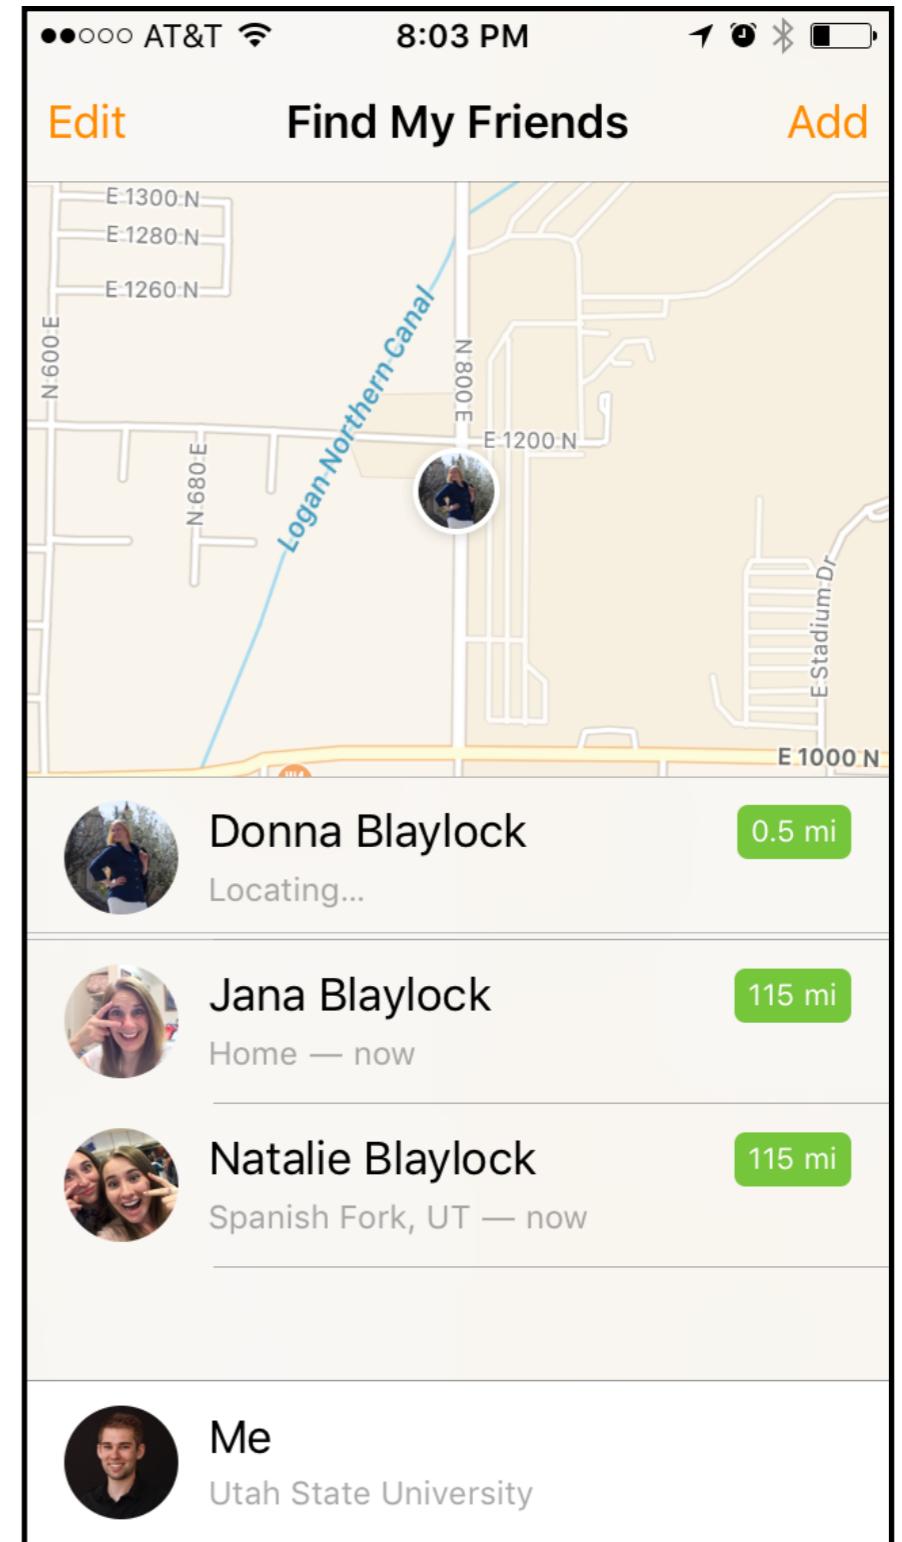

*Where to see who you send to*

# FIND MY FRIENDS, AKA THE “STALKER APP”

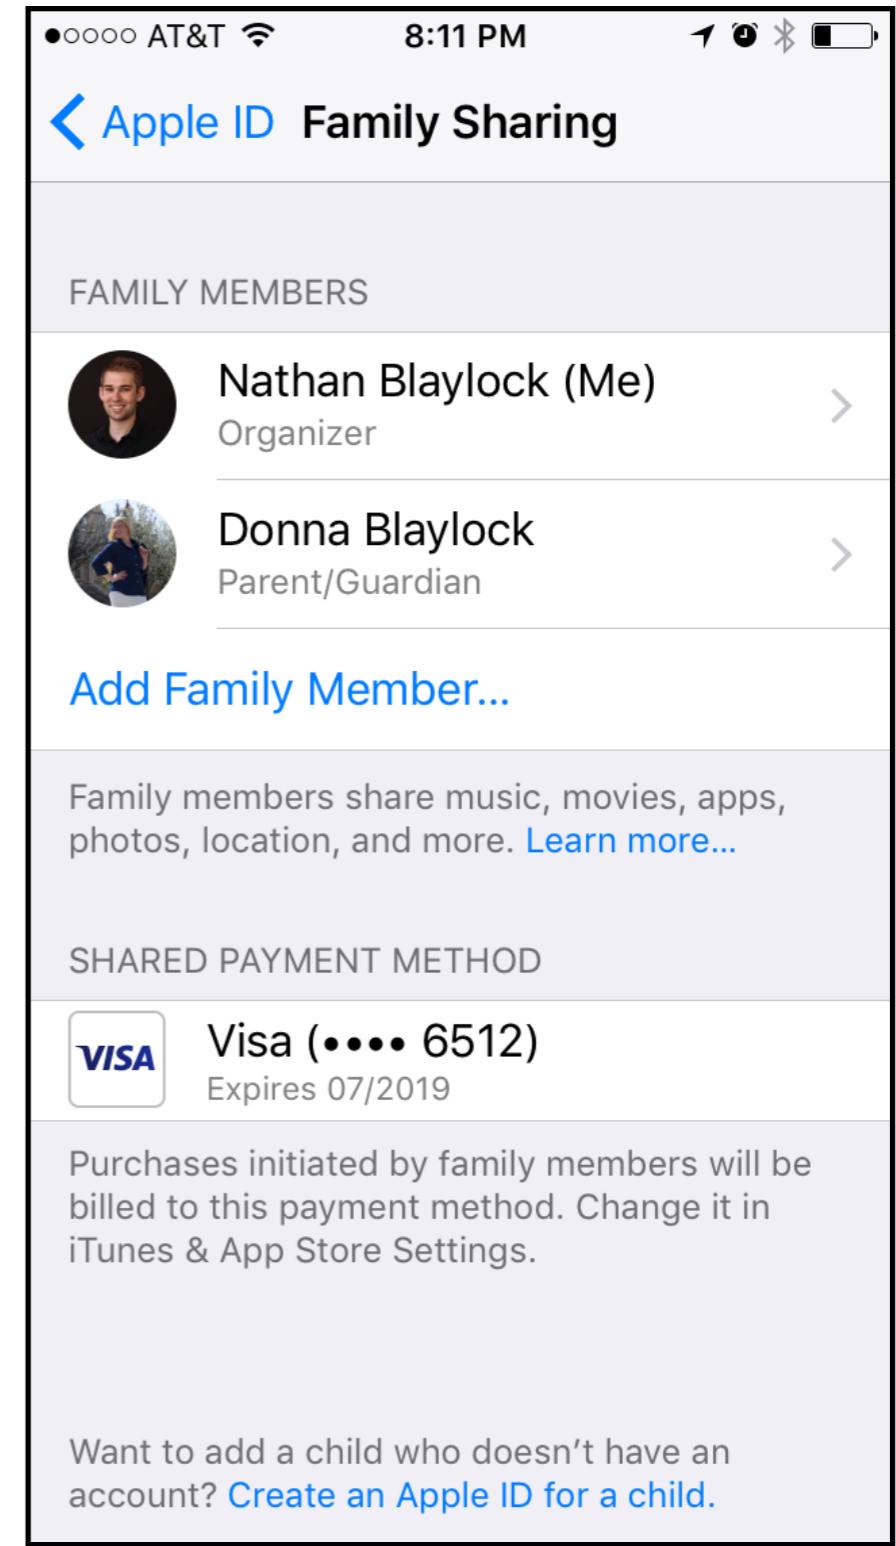

- You can request to follow a friend and know where they are
- They must have data or wifi in order to send the signal
- Somewhat similar to how “Find my iPhone” works

# SET UP FAMILY SHARING

- ▶ Go to Settings, then tap on the top option with your name and account info.
- ▶ Look at the options and select Family Sharing.
- ▶ Here you can connect your account with another family members. This means:
  - i. You can share purchases between each other such as music, movies, etc
  - ii. If you need to use “Find my iPhone” you can look the other up without needing to sign in to their account.

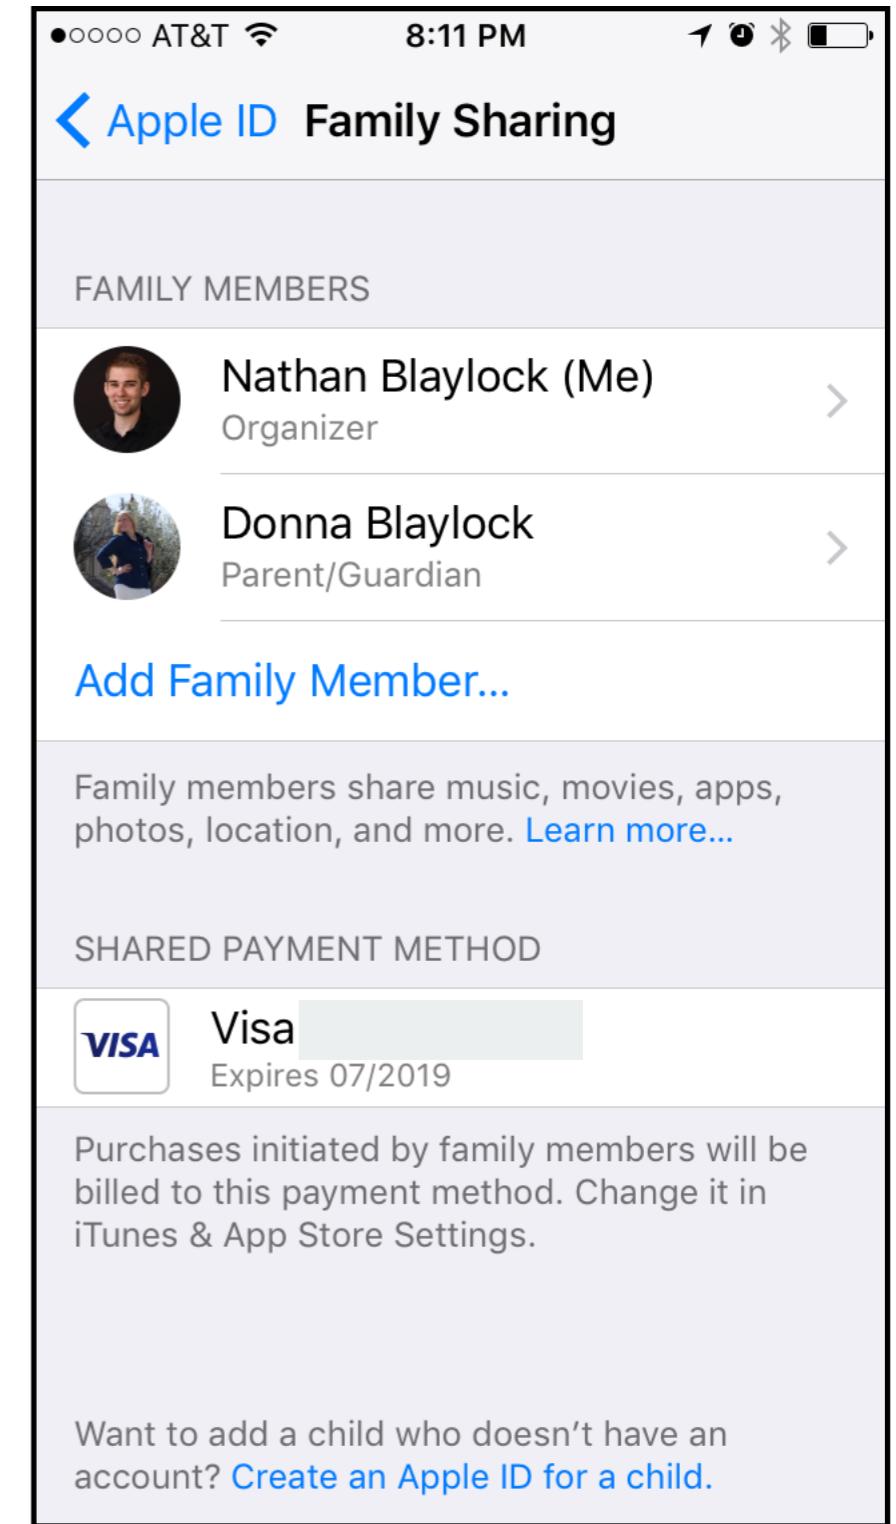

# PURCHASING

---

- ▶ In order to buy music, movies, apps, and other items from Apple, you need to have a credit card connected to your account.
- ▶ Go to Settings, tap on your name with account info (first item in Settings)
- ▶ Next tap on “Payment and Shipping”
- ▶ Follow the Steps to add a card to your account.
